Letter of Recommendation

To Whom It May Concern,

I am pleased to provide this letter of recommendation for Mohammad. During his internship with our team, he assisted in building key features for our startup, demonstrating both technical skill and a high degree of ownership over his work. From the start, he distinguished himself not just as a capable engineer, but also as someone who approaches problems with a founder's mindset: moving with urgency, taking ownership, and consistently pushing work forward without needing direction.

Mohammad worked directly with our then-CTO, who is a PhD candidate in Computational Science and Engineering from MIT, and consistently met the high technical and professional standards expected in that environment. He was instrumental in implementing core systems that supported our platform. His work included building secure user authentication processes, managing cloud-based deployments, and integrating AI-driven functionality. He moved quickly and independently, making thoughtful technical decisions while maintaining a focus on scalability and security. His ability to translate ambiguous startup ideas into working systems was particularly impressive, consistently delivering meaningful progress in a fast-paced environment.

Mohammed has shown a strong drive and initiative. He approached challenges and roadblocks with professionalism, often taking the initiative to resolve issues independently. At the same time, he showed strong judgement. Mohammad understands both his strengths and his limits, and proactively seeks out input when needed. This balance allows him to move fast without compromising on quality, which is critical in early-stage companies. Furthermore, on a personal level, he is highly reliable and easy to work with. He communicates clearly, is receptive to feedback, and brings a thoughtful, solutions-oriented mindset to every conversation.

I recommend Mohammad without reservation. He possesses the technical capability, work ethic, and mindset necessary to succeed in a demanding environment such as accelerator programs, startup initiatives, or engineering teams. Should you have any questions, feel free to reach out to me at mhassen@mba2026.hbs.edu.

Sincerely,

Mubarek Hassen, Founder and CEO
